Important Safety Instructions

Before Installation or Operation:

- Read the supplied manual and ensure correct installation and use of the product/s
- Empty the dust container regularly
- Check the condition of the filter cartridge regularly
- Do not install outside unless proper weather protection is in place
- Do not connect to a non grounded supply or a non approved supply
- Do not service the Power Unit unless it has been disconnected from the supply
- Do not use with a damaged electrical lead or plug
- Keep electrical lead away from heated or sharp objects
- Keep inflammable objects or liquids away from the Power Unit
- Do not place or store anything on top of the Power Unit
- Do not place or store anything that may restrict the air flow of the Power Unit
- Do not vent the Power Unit into a wall, a ceiling, or any enclosed space
- Do not vacuum any wet surfaces
- Do not vacuum any liquids, including any fuels
- Do not vacuum anything that is hot, burning or smoking
- Do not vacuum any ash, even it appears dormant
- Avoid vacuuming plaster dust or talcum powder, which can cause clogging of the filter cartridge
- Do not obstruct, block or impede the hose or wall valve inlets
- Keep hair, all parts of the body and loose clothing away from the hose or wall inlets
- Do not use non recommended attachments or accessories
- Pay close attention to children while the system is being used
- Do not allow children to use the system as a toy

Warning
Improper Use May Cause Fire, Electric Shock or Injury
Introduction

Use of the manual
The instruction manual for use and maintenance is an integral and essential part of the vacuum power unit and must be handed over to the user. It must be kept in a safe place and consulted carefully as all of the warnings provide important instructions for safety in the phases of installation, use and maintenance.

Responsibility
The vacuum power unit must be used only for the purpose for which it has been designed. Any other use is considered improper use and is therefore dangerous. The manufacturer accepts no contractual or extra-contractual liability for damage arising from a wrong installation or operation or from the non-compliance with the manufacturer’s instructions.

Warranty
Your central vacuum system has been engineered for a long, trouble-free service life. Your power unit is covered by a factory limited warranty that is enclosed with these instructions.

Please read your limited warranty carefully. If your owners manual came with a warranty card, fill it out and return to iCentral. You should fill out your registration card within ten (10) days of installation and return to address listed on the card. Remember, your warranty does not cover abuse or misuse of the equipment.

You can also register your warranty online at www.valet.com.au

HANDLING & UNPACKING
Do not remove the unit from the packaging until installation to prevent accidental damage.

Use suitable handling equipment.

Check that the product is not damaged and the standard parts are contained in the dust container.
Components (V100)

- Fuse
- Power input
- Low voltage switch input
- Sound-proof motor compartment
- Air Exhaust
- Wall bracket
- Air intakes x 2 (for left or right hand installation)
- Dust container hinges
- Filter cartridge
- Dust cone
- Dust container
Installing the Power Unit

Positioning
The power unit should be installed in service rooms such as a store-room or garage and protected against weather, humidity and sudden changes of temperature.

The power unit is not designed for outdoor use unless suitably protected.

The installation place shall be sufficiently spacious and well lit to allow for an easy access to the vacuum unit.

When installed indoors or in a semi-enclosed area ensure the space is properly ventilated.

The power unit must be fixed to the wall at a height that allows for an easy dismantling of the dust container and the replacement of the filter cartridge.

If Using a Wall Bracket

1A. Mount the bracket on the wall.

If Mounting Direct To The Wall

1B. Drill. Using a spirit level check that the bracket is level

2. Release the locking lever.
Installing the Power Unit

3. Remove the support from the guides.

4. Fit the vibration blocks to the support.

5A. If using a wall bracket. Fix the support to the wall bracket.

5B. If mounting directly to the wall. Screw the support to the wall.

6. Remove the dust container.

7. Secure the Power Unit to the support.

8. Make sure the locking lever locks into position.

9. Attach the dust container.
Connecting the PVC Pipe

**Installation with natural exhaust**
Suitable for outdoor (undercover) installations.

* Two air intakes are provided - for left or right hand pipe entry. The unused intake must blocked with the cap provided.

**Installation with optional exhaust pipe**
Suitable for installation in enclosed spaces.

* Two air intakes are provided - for left or right hand pipe entry. The unused intake must blocked with the cap provided.
Electrical Connections

The electrical installation of the power unit must be done by qualified electrical installers according to local regulations.

The Manufacturer accepts no liability for malfunction of the power unit or damage to persons or property attributable to an incorrect electrical connection.

Final check

Once the power unit has been connected to the mains, check all vacuum sockets using the flexible hose.

⚠️ Danger:

Do not touch the power unit with wet or damp hands.

Keep non-authorised people and children clear of the power unit.

---

**Diagram**

- Mains socket
- Fuse
- LED - Power ON
- LED - Unit Running
- Low voltage switch input
- Standard 10A mains power point
- Low voltage wiring to inlet valves
Start vacuuming

Standard Hose operation

TO START - insert the hose into one of your inlet valves.

TO STOP - remove the hose and hold the flap open for a couple seconds until the motor stops.

Switch Hose operation

TO START - insert the hose into one of your inlet valves. Align the locating tab on the hose cuff with the two guides on the inlet valve.

If the hose is inserted correctly the power unit will not start until you turn it on using the switch on the hose handle.

TO STOP - turn off using the switch on the hose handle then unplug the hose from the inlet valve.
Emptying the dust container

⚠️ Before any maintenance job, turn off the mains power at the power point. Regular maintenance increases the life span of the power unit and ensures maximum performance.

⚠️ Regularly check the system for leaks or blockages.

⚠️ Do not operate the power unit without a filter cartridge. Not observing this precaution may result in serious damage to the motor and will void the manufacturer’s warranty.

⚠️ Please wear a dust mask and gloves.

1. Remove the dust container.
2. Lift out the Dust Cone.
3. Empty the dust container.
4. Replace the cone ensuring it is pointing downwards and reassemble the dust container paying attention to the seal position.
Cleaning the filter cartridge

- Please wear a dust mask and gloves.

- Do not operate the power unit without a filter cartridge. Not observing this precaution may result in serious damage to the motor.

- Use only genuine Valet spare parts.

1. Wash the cartridge with tap water taking care not to damage the filter material.

2. Allow the cartridge to dry.

3. Check for damage and replace the cartridge if necessary.

If the central vacuum system is used regularly, check the filter cartridge at least every 4 months.

- Remove the filter cartridge and wash it with tap water. During washing pay attention not to damage the filter material.

- If the filter is damaged during cleaning the cartridge must be replaced.

- After washing, allow the cartridge to dry. Do not expose it to strong heat sources.
Replacing the filter cartridge

⚠️ Turn off the mains power at the power point.

Please wear a dust mask and gloves

Replace the filter cartridge every 2-3 years. This interval is variable depending on how often your central vacuum system is used.

1. Remove the dust container.

2. Loosen the retaining nut and remove the old cartridge.

3. Insert the new cartridge and tighten the retaining nut by turning the cartridge until it fits snugly in place.

4. Replace the cone ensuring it is pointing downwards and reassemble the dust container paying attention to the seal position.
